

P&L Motorsports GT30/35R Install addendum: v1.2.01

© P&L MOTORSPORTS | WWW.PANLDMOTORSPORTS.COM

After the steps on page 52 of the v1.2 installation guide are completed, locate the up-pipe support bracket that was included in the turbo assembly.

Use two 16MM wrenches to loosen the bolt/nut combination on the up-pipe closest to the corner of the passenger side head.

Attach the beveled edge of the support bracket to the turbo up-pipe by loosening the nut on the up-pipe and sandwiching the beveled end of the bracket as shown on the left side of the picture.

Attach the other end to the factory mounting hole, where the factory support bracket was located. (Reference the right side of the picture)
